EDUCATION

Vellore Institute of Technology

Bachelor of Technology in Computer Science Engineering

Bhopal, India

Sept 2023 – May 2027

TECHNICAL SKILLS

Languages: Python, C/C++, SQL, Java, JavaScript

Frameworks: React, Node.js

Developer Tools: Git, Visual Studio, PyCharm

Libraries: pandas, NumPy, Matplotlib

EXPERIENCE

Freelance Web Developer

Feb 2024 – March 2024

- Revamped the hospital's online presence by developing a robust website with combined appointment scheduling, facilitated seamless access for patients, leading to a 50 percentage decrease in administrative call volumes.
- Crafted a user-friendly interface for web applications, enhancing overall patient engagement by facilitating easy navigation on both desktop and mobile devices; achieved an increase in appointment bookings by 30 percentage.
- Collaborated key functionalities such as online appointment scheduling and patient information management. Ensured compliance with healthcare data privacy and security standards.

PROJECTS

Decentralized Voting Application | Blockchain, Ethereum, Solidity, React.js, Web3.js

Sept 2024 – Present

- Developed and deployed a tamper-proof voting platform using Ethereum blockchain and Solidity, ensuring transparent and secure elections with immutable vote recording.
- Built a responsive React.js frontend integrated with MetaMask for secure authentication and real-time voter participation.
- Deployed the frontend on IPFS, tested on Goerli Testnet, and evaluated layer-2 scaling solutions for efficiency in large-scale elections..

Netflix-Style Video Streaming Website | Spigot API, Java, Maven, TravisCI, Git

Jan 2024 – May 2024

- Consolidated rigorous testing procedures that improved website responsiveness; diminished average page load time to under two seconds through targeted code optimization and efficient media handling strategies during development phases.
- Implemented intuitive browsing functionalities through genre-based filters, resulting in a notable increase of daily active users by approximately 200 individuals who frequently utilized these new navigation tools.
- Reduced page load time by 25 percent through optimized jQuery animations and efficient code structuring.

CCTV Report Summarization API | Python, Flask, OpenCV, REST API

Oct 2023 – Dec 2023

- Engineered a robust RESTful API for analyzing CCTV footage, generating comprehensive reports on suspicious activities; reduced manual review time by 40 hours per month, enhancing overall security team efficiency.
- Composed innovative functionalities for reviewing CCTV footage, including a user-friendly interface that highlighted suspicious frames; this streamlined the review process, enabling faster analysis of over 100 hours of video content monthly.
- Designed and instigated a robust machine learning pipeline that automated data cleaning and preprocessing tasks; reduced processing time by 50 hours monthly, allowing data scientists to focus on model development.

ACHIEVEMENTS

- Finalist in IIT Madras Malware Analysis Hackathon; identified three key vulnerabilities impacting enterprise cybersecurity frameworks.
- Secured a position among the top 20 teams in this national-level cybersecurity hackathon organized by the Data Security Council of India.
- Finalist at HackByte 3.0, a 36-hour national hackathon at IIITDM Jabalpur; among top 8 of 500+ participants selected by sponsor BenQ for exclusive monitor sponsorship. One of 7 teams chosen to represent college.
- Finalist at the Unplugged University Hackathon developing an LLM-based MCQ Generator, competing among top teams from over 1,800 participants
