EDUCATION

Vellore Institute of Technology — Bhopal, India
May 2027

Sept 2023 –

Bachelor of Technology in Computer Science Engineering

TECHNICAL SKILLS

Languages: Python, C/C++, SQL, JavaScript

Frameworks: React, Node.js

Testing & QA: PyTest, Unit Testing, Integration Testing, Test Case Design, SDLC/STLC

Developer Tools: Git, Visual Studio, PyCharm

Concepts: OOP, REST APIs, Debugging, Embedded Systems (beginner)

Libraries: pandas, NumPy, Matplotlib, OpenCV

EXPERIENCE

Freelance Web Developer

Feb 2024 – March 2024

- Revamped a hospital website featuring appointment scheduling, reducing administrative call volumes by 50%; validated all critical user flows through manual test cases aligned with STLC principles.
- Designed and tested a responsive UI for both desktop and mobile; conducted cross-browser and cross-device compatibility testing, resulting in a 30% increase in appointment bookings.
- Ensured compliance with healthcare data privacy standards (HIPAA-aligned), performing security and regression testing on patient information management modules.

PROJECTS

Decentralized Voting Application | Blockchain, Ethereum, Solidity, React.js, Web3.js

Sept 2024 –

Present

- Developed and deployed a tamper-proof voting platform on Ethereum; wrote Solidity unit tests using Hardhat to verify immutable vote recording and smart contract correctness.
- Built a React.js frontend with MetaMask authentication; performed functional and integration testing across wallet connection, vote submission, and real-time result display flows.
- Deployed frontend on IPFS and tested on Goerli Testnet; evaluated layer-2 scaling solutions and documented test results for large-scale election simulation scenarios.

Netflix-Style Video Streaming Website | Java, Maven, TravisCI, Git

Jan 2024 – May 2024

- Implemented a CI/CD pipeline using TravisCI for automated build and test execution; wrote unit and regression tests that reduced average page load time to under 2 seconds through targeted optimization.
- Designed genre-based filter functionality with test cases covering edge cases and boundary conditions, contributing to a 200+ daily active user increase.
- Reduced page load time by 25% through optimized jQuery animations; validated performance improvements using browser profiling and systematic debugging techniques.

CCTV Report Summarization API | Python, Flask, OpenCV, REST API

Oct 2023 – Dec 2023

- Engineered a RESTful API for CCTV footage analysis; designed and executed test cases covering API endpoints, error handling, and response validation, reducing manual review time by 40 hours/month.
- Built an ML pipeline for automated data preprocessing with PyTest-based unit tests for each processing stage, ensuring reliability across 100+ hours of monthly video content.
- Applied systematic debugging and OOP design principles throughout development; documented test plans and results following STLC methodology from requirements through deployment.

ACHIEVEMENTS

- Top contender at the IIT Madras Malware Analysis Hackathon; identified and documented 3 critical cybersecurity vulnerabilities in enterprise frameworks — applying systematic analysis and debugging skills directly relevant to software quality assurance.
- Finalist at Unplugged University Hackathon (1,800+ participants); developed an LLM-based MCQ Generator, handling end-to-end testing and validation of model outputs.

- Enhanced an AI bot's features and testing procedures, increasing customer satisfaction ratings by 40% within the first 3 months of deployment through iterative quality improvements.
